

Software Quality Assurance Engineer – Principal and Senior level

Titan IC is a world leader in the development of hardware engines for content and network processing. Its solutions are used in all aspects of network security including: Intrusion Detection/Prevention, application detection, and anti-virus.

We are undergoing dynamic growth and are currently seeking a Software Quality Assurance Engineer to test our innovative network security technologies and products. The successful candidate will partake in the development of the Automated Test Infrastructure (ATI) along with developing test cases to stress each of Titan ICs products.

Essential skills, qualifications, and experience:

- Honours Degree in Computer Science, Electronic Engineering or related discipline (or equivalent experience)
- Experience working with Linux platforms
- Experience using continuous integration tools
- Experience in implementing verification strategies for complex software products
- Experience developing test plans, automation, and project regression suites
- A good understanding of scripting languages (shell, Python or Perl)
- Flexible, organized and able to quickly learn new skills

Desirable skills, qualifications, and experience:

- Experience in working with embedded software
- Knowledge of network communication protocols
- Experience with network security applications
- Documentation and communication skills

The successful engineers will interact with the business team and customers at all stages of the product life cycle, utilizing their excellent communication and organizational skills within a fast-paced environment.

Location: Belfast, UK

Senior level rate: up to £40K based on skillset and experience

Principal level rate: up to £50K based on skillset and experience

Deadline: Please send copy of CV, outlining how you meet the above criteria by Friday 11th January 2019 to Deirdre Lavery: lavery@titan-ic.com
